

**What You Need:**

- 2-liter soda bottle, cleaned with soap and water
- Scissors
- Soil
- Small plant that likes humidity
- Pebbles
- Small plastic animals
- Bits of bark
- Masking tape

**What You Do:**

1. First, ask your mentor to cut off the top of the bottle, down a few inches so that you can easily reach into it. Ask your mentor to put tape around the edge of the area, to cover the sharp edge. Save the top.
2. Now, you will sprinkle some pebbles into the bottom of the terrarium for drainage.
3. Fill the terrarium  $\frac{3}{4}$  full with soil and make a hole in the soil for the plant.
4. Carefully place the plant into the hole and fill around it with soil.
5. Arrange some pebbles, plastic animals and bits of bark to make it look like a nature scene.
6. Lastly, water your plant and put the "lid" back on the plant. Leave the small plastic cap off of the bottle. You now have a terrarium! Make sure to put it somewhere there is light from the sun.
